

NUTRIENT MANAGEMENT (CSP Enhancements)

April 2005

Enhancement Activity Task Sheet

WV-CSPENM-TS

Clients Name:

Worksheet 6 – Increase Sod Use

Payment = \$8/Acre/yr to convert row crop fields to perennial forage or increase hay in a crop rotation. To qualify the field(s) must have 90% of their soils in capability class I-IV. To insure plant species remain productive nutrients will be applied according to crop needs. Perennial forage will be grazed no shorter than 3 inches and height at killing frost will be a minimum of 5 inches. Extending hay in a crop rotation or converting row crop production system to adoptable perennial forage reduces the use of nutrients.

Use this (or similar) table to document location and incorporation method used.

Tract & Field #s or Names	Acres	Crop Rotation	Prior Years of Sod in Rotation	Existing Years of Sod in Rotation	Nutrients Applied N-P-K lbs./ac
		Corn-Hay	3		
T486-2	20	Corn <i>Example</i>	0		

Increased Sod Use Certification

I certify that I have increase the use of sod on the field(s) as documented in the table above and I am maintaining the sods productivity.
