WV-CSPAIR-TS**

Worksheet 1- Use Windbreaks To Reduce Spray Drift and/or Reduce Dust

Payment= \$3.00/ acre protected/yr to manage cropland to reduce drift or spray through the use of windbreaks. The windbreak will be a single row or more of adoptable trees and or shrubs. The windbreak is located upwind (prevailing wind) of the row crop area to be protected. Inspect windbreak every 6 months. Dead trees or shrubs will be replaced; the windbreak will be protected from fire or livestock. (**Note:** The distance that protection extends from the windbreak's leeward side is 600 feet and the payment for protected area only includes cultivated row crop).

Tract & Field #s or Names	Length Of Windbreak (ft)	Species In Windbreak	Acres of Row Crop in Protected Area	Inspection Date
T2001 Field 8	1000	White Pine & Norway Spruce	5.2	9/1/05

Reduction of Spray Drift Certification

I certify that I have use a windbreak in the field(s) listed in the table above and I properly documented acres of eligible protected areas.
